1. Claims 1-20 and 27 are allowed.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-26 are rejected under 35 U.S.C. 102(b) as being anticipated by

Lawhon et al.

Lawhon et al discloses alkaline extraction (e.g. 60 C and pH 8) of ground soybeans to provide an extract wherein said extract is then put through an ultrafiltration stage at a cutoff of 50,000 daltons (or as high as 100,000 daltons). As for the particular contact angle in the microporous membrane, it is not seen where same would provide for a different product, since this attribute pertains to a processing consideration (avoiding fouling), rather than an attribute of the product produced.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Lawhon et al taken together with Hodgins et al.

If it is shown that the particular membranes employed in the instant claims would provide for a different product, it should be noted that said membranes are known in the art as taught, for example, by Hodgins et al. Absent a showing of unexpected results, it

would have been obvious to one having ordinary skill in the art at the time of the invention to have included same to provide the product advantages of Hodgins et al.

If it is shown that the retentate in Lawhon et al is not pasteurized, it is notoriously well known to pasteurize liquid food to increase shelf life, and it would have been further obvious to have included same for such reason.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Weier whose telephone number is 703-308-3846. The examiner can normally be reached on Monday-Friday.
